

Elementary Board Report December 2023

Mr. Monteith hosted the Hour of Code for elementary students to work on their Code.org and were able to play coding games.

Mrs. Lechtenberg's first grade class participated in the innovation lab this month. They read the story Polar Express and then used their engineering skills to build a bridge.

Ms. Vossberg's class has been reading about different gingerbread characters. They conducted an experiment to see what would happen if the gingerbread man swam across the river. After their experiment they were able to enjoy a gingerbread cookie.

We had a very successful elementary music concert. The kids did a wonderful job performing and I've received positive feedback from parents.

First grade students created their balloons for their "Macy's Day Parade". A big thanks to Mrs. Thronson for putting together a video for parents and community members to view.

Third grade students worked on their Project Linus. They were able to make 18 blankets that are gifted to children in our area who are in need. This is a great experience for our students to participate in and to welcome parents and grandparents into the building.

Throughout the month of December students and staff are invited to participate in a variety of different dress up days and themes. On Grinch Day students were welcomed to school by the Grinch himself! The Grinch also visited and read to 2nd graders.
